

Bike Bumper™ Fairing Protector Installation Instructions

1) Open and unfold the cover completely before slipping one outer pad at a time over the sides of the fairing. When securing the second side, make sure that the hold down straps are not trapped underneath the cover.

2) Batwing Fairings: Once the cover is attached at both edges continue by securing the lower hold down straps around the turn signals on both sides.

Roadglide Fairings: Secure the hold down straps using the plastic clips and eyelets across the bottom area (side-to-side). Do the same using the hold down straps from the top of the cover to the bottom securing the plastic clips to the attached eyelets at the top edge of the cover. Secure the Velcro straps around the front turn signals.

When attaching the plastic clips pay careful attention to make sure they DO NOT rest on the painted fairing.

3) Continue by securing the upper hold down traps around each handlebar grip as shown. It is important that these straps stay relatively tight to avoid the cover flapping. If the straps are not tight when placed around the handlebar grips please find an alternate location to secure them.

Thank you for your purchase of the Bike Bumper™ Fairing Protector. We know you will get years of great use out of it, but if you have questions or concerns please feel free to contact Cycle Sounds, LLC toll free at 1(866)427-2346 or (816)525-2628.
